

SAFEPAK Bank Security CORPORATION

Open the Safe

We Know Armored Carriers

As an Armored Carrier your highest priorities are **safety** for your personnel, **security** for your clients & **profitability** for your company. SafePak systems have been helping armored carriers accomplish all three since 1995 without a single loss....ever.

How The SafePak System Works

The SafePak bag automatically locks into the frame inside the depository. All deposits fall directly into the locked bag and remain locked in that bag until it is delivered to processing.

Reduce Risks & Increase Profits

Switch the Bags

Double-custody retrieval is not required. A single carrier opens the safe, slides an unbreakable lid into a narrow slot at the top of the bag, and it automatically locks in place. Only then is the locked bag released to the carrier. The carrier removes the full bag and inserts an empty bag, closes the safe and is gone in less than 30 seconds.

No counting, no manifesting, quick in and out without ever exposing merchant deposits.

Not a Single Loss...Ever.

Gone in 30 Seconds

Safety- Minimize on-site danger for your personnel with 30-second deposit retrieval.

Security- Eliminate loss by denying access to merchant deposits. Each SafePak bag is locked and electronically monitored from the depository to the processing site.

Profitability- Increase route efficiency by making more stops in less time, with fewer personnel, fewer trucks, no losses and no investigations, allowing you to compete more effectively in the bidding process.
